

How would you like to have your own "Energy Expert" on staff? This expert is always working, constantly looking at the energy use of your facility and telling you when you are saving money (or wasting it!). Now you can finally have an effective way to keep tabs on this large operational expense within your facility!

Facility managers often make changes to their operations and equipment in anticipation of realizing energy savings. Typically, these investments are made based on having an attractive financial return for the building owner...so far, so good. Where it gets tricky is in actually measuring the savings. Was it hotter than normal last month? Maybe colder? Weather and other factors make it extremely difficult to "sift out" the energy savings that should have been realized? Here is where the Energy Expert can help. It tells you on a daily basis if your changes are having a measurable, positive impact on the overall building energy cost. It even takes hourly weather, day-type and time of day into account in its energy predictions.

The award winning* Energy Expert tool was developed in close cooperation with the U.S. Department of Energy's Federal Energy Management Program with the goal of helping save energy in commercial buildings. This sophisticated, yet easy-to-use software application creates a "smart model" of how your building should consume energy and compares daily performance against it. To learn more about the modeling approach, visit <http://www.energyworksite.com>.

** Energy Expert was selected for the 2008 FLC Award for Excellence in Technology Transfer*

With Energy Expert you'll get:

- Daily Scorecards to concisely show your energy use, cost savings, load profile and a five-day weather forecast with a risk of peak days highlighted
- Daily interactive and month-at-a-glance load profiles charts so you can spot trends and problems.
- Email or pager notifications when your energy use falls outside expected levels.
- Access to the results anywhere you have Internet connection.

Tells you every day how much energy your facility is using.

Energy Expert continues our commitment to deliver emerging technologies to our customers, along with a never-ending search for improvements to productivity and world competitiveness.

Well defined graphs, charts, and tables display information in an easy to understand format so you can act quickly.

Next day Email or pager notification alerts you when your energy use falls outside expected levels.

ENERGY EXPERT

Application Overview

NorthWrite - The WorkSite Company

Paul Bursch
Chief Technical Officer
NorthWrite

Typical Users of Energy WorkSite

- Commercial and Industrial
- Multi-location Owners
- Energy Decision Makers
- Energy Service Providers
- Facility Managers
- Government
- Utility Companies
